Cloud Hosting

For enterprises that need real-time communications without IT investments. Run Video RTC platforms in the most secure and scalable cloud computing environments in the market.

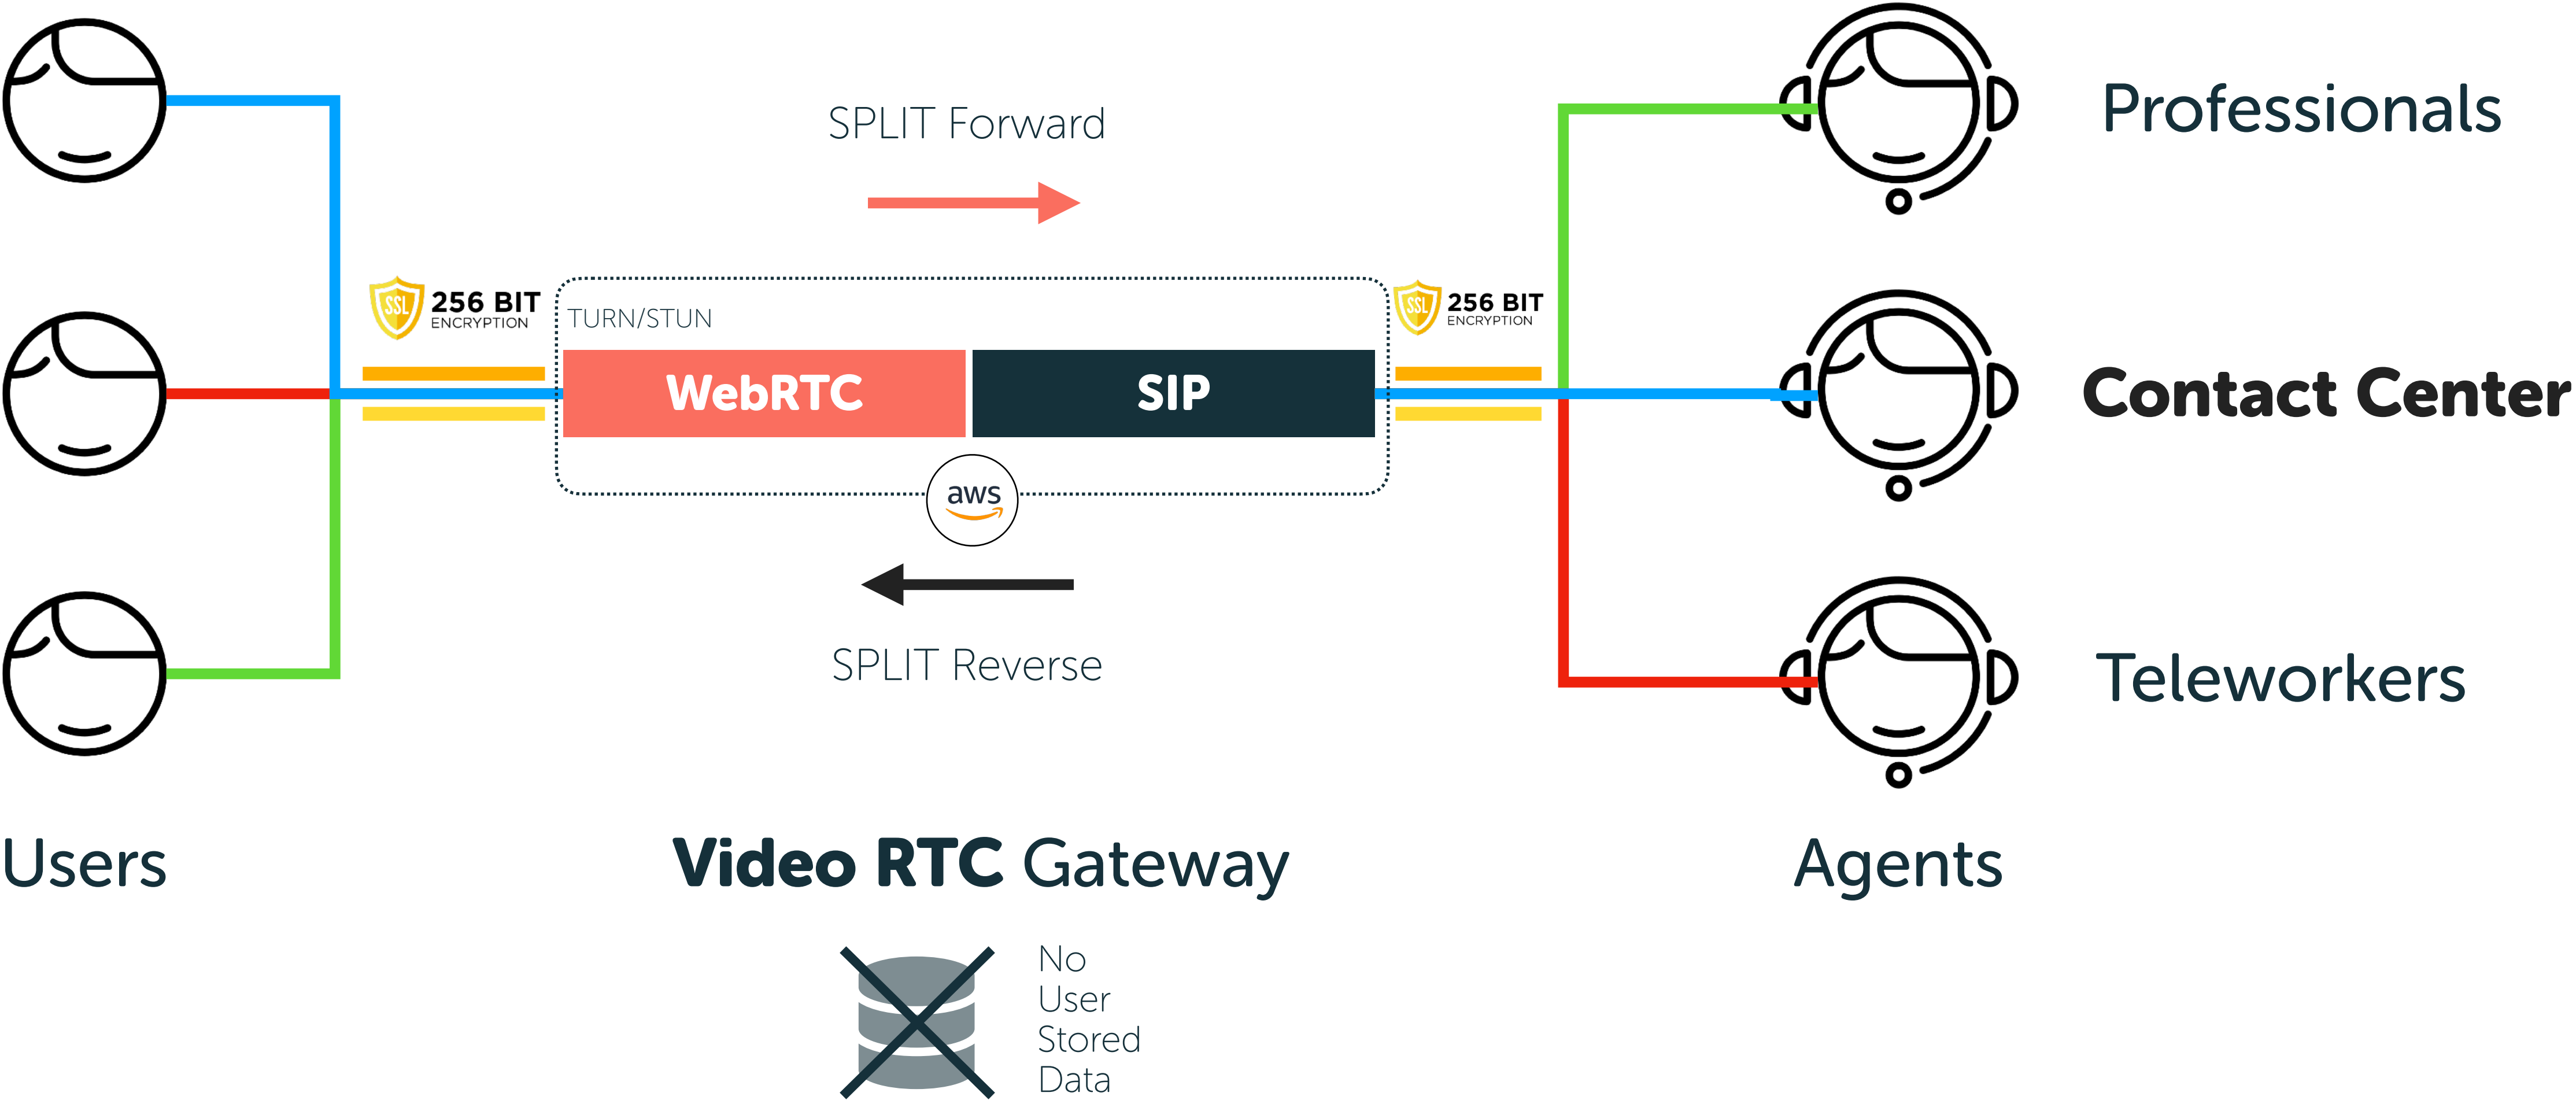

7 Security Principles

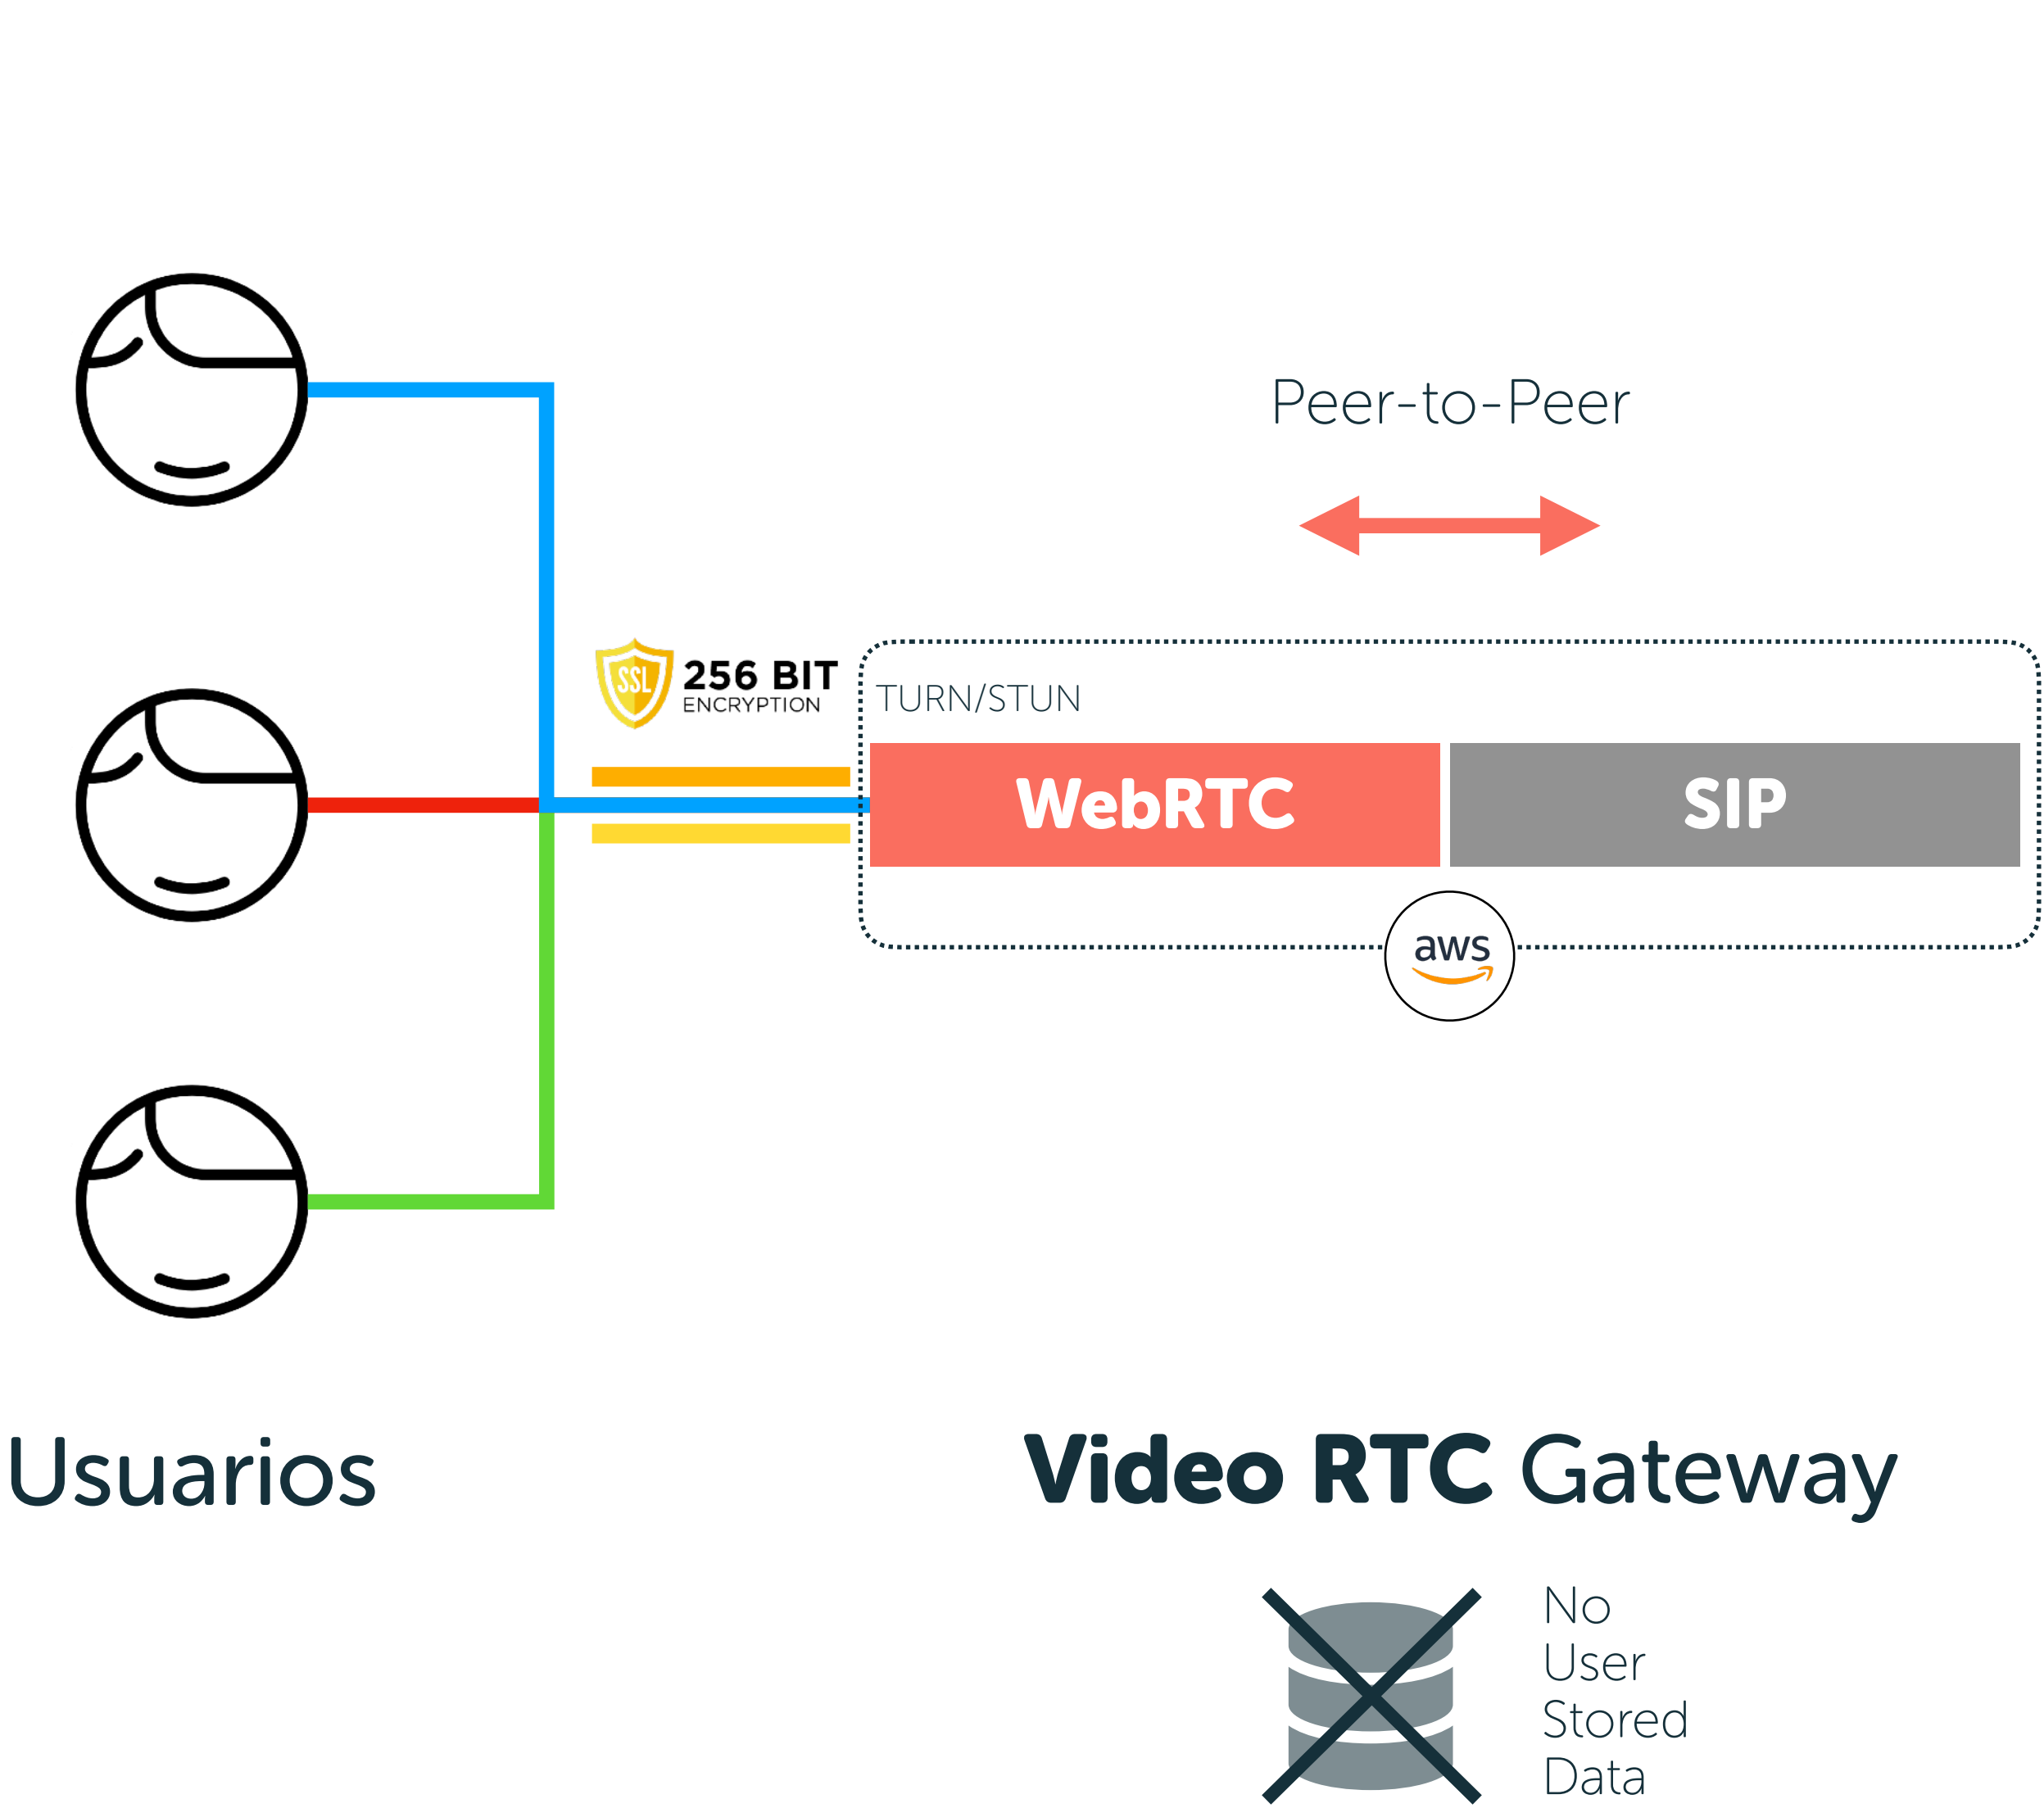

1. Media is **encrypted end-to-end** (E2E) using WebRTC security protocols.
2. SSL certificates are only deployed for no less than **256 bits encryption**.
3. **TURN servers are internal** and cannot decrypt or manipulate the media.
4. it is not possible to record or interoperate SRTP or DTLS-SRTP traffic with other services.
5. Management Operations are under **AWS security conditions** (no media data storage).
6. **No recording** capabilities inside the media servers, external REC Storage required.
7. Dedicated platforms administration and monitoring can be assigned to customers.
