No Apps, No Downloads, No Register is a must,  
it's no longer an option for Video.

## Browser-based Video Calls

Some video conferencing software will make you download the desktop or mobile app to host and join video calls. But Interactive Powers is browser-based, which means it won't force you to download an app. Host and join meetings from a web browser using your computer or mobile device, and get it all running with No App, No Downloads, No Register.

# Security & Privacy

Keep your meetings secure with strong hybrid WebRTC / SIP 256-bit encrypted real-time communications and session tokenization. Interactive Powers' settings allow the host to mute participants, process biometrics API, lock file sharing, selected dual screen sharing, encode all parameters and much more.

Security and Privacy are key questions even for your business Video Calls.

Video Calls without powerful Web Collaboration tools,  
is like speaking without taking action.

## Dual Screen Sharing CoBrowsing

Need to zoom in on a design mockup or run through a contract approval? Interactive Powers dual screen sharing feature lets double share contents from agent and user at the same time. By the way, you choose between sharing a specific window or tab or your whole desktop. You can send screen sharing to a mobile screen too. Again, no downloads needed.

# Video Calls Control & Transfer

In our agent side, all the call controls you need are easily in reach. Adjust your call settings, start a screen share, flip, mute and unmute yourself, or start and pause yourself or video recording. It's all in a clean, video centric, easy-to-use interface that lays out all these options for you right on the screen and our smart FLAB button.

High Performance Video Calls require at least the same transactional functions as Phone Calls.

Powerful Real-Time Communications,  
where Video First is a top priority Channel.

## Video Centric for Unified Communications

Beyond video calls, what if your team also communicates through phone calls and text chat? Interactive Powers lets you consolidate all those tools into one. Talk, message, and meet all from one convenient channel. That makes for fewer software to pay for and manage and less time wasted on context-switching for all your team.

# Contact Center Integration & Interoperability

Seamlessly integration with industry standards and leading Contact Center technologies. Our Empowered Omnichannel enables agents to keep working on a single platform while they are face-to-face interacting with your customers. The cost reduction in average response time speeds up task completion, avoids errors and provide an amazing customer experience.

Transform your existing Call / Contact Center into a more engaging platform with Video Calls.

Outstanding HD quality and Video Recording  
for any business Customer Service.

## HD Quality Video Recording

No one wants laggy audio or pixelated video quality in a meeting, especially when you're meeting with clients or prospects. Interactive Powers comes with crystal-clear HD video, adaptive bandwidth management and the most advanced video recording storage system for any size and scalable Video Call / Contact Centers deployment.
